

Cylinder Size Chart.

Industrial, and Acetylene Gases.

Industrial Gases

Acetylene Gases

Cylinder Options. High Pressure, and Bulk Packs.

Our **bulk packs** contain multiple individual gas cylinders and provide unique benefits:

- Minimize worksite interruptions, especially if the scope of work is large
- No direct cylinder handling
- Increased worksite productivity
- Run multiple welding machines from a single source for a prolonged period of time

Please inquire into NWS' manifold selection which can reduce psi to a workable pressure from a bulk pack for up to **6 individual welding machines*

Northern Welding Supplies **High Pressure** single cylinders also provide unique benefits and only require a high pressure regulator to run:

- Increased volume of gas providing a cost savings per cubic metre
- Longer runtime with a single cylinder
- Increased worksite productivity and fewer overall cylinders required for small to medium work scopes
